PALLET CHANGER

The Pallet Changer Overview:

The Pallet Changer is the most sophisticated pallet transfer machine offered by Premier. This pallet changer allows for an operator to change the pallet beneath a load without having to touch them. Our Pallet Changers are custom built for our customers looking for specific stack heights and where loads are stable while resting on their side. The side clamping system ensures a load will maintain its integrity. The Pallet Changer is a completely automated system and fitted with fixed guarding.

The Pallet Changer Uses Include:

- Replace wooden pallets with plastic pallets or other hygienic pallets
• Transfer outgoing loads to export or shipping pallets
• Properly handling loads that must remain upright after transfer

The Pallet Changer Features:

- Gripping system automatically adjusts to anything that fits its specs
• Side walls retain loads with optical sensors or pressure options
• Floor level loading - no ramps necessary
• 25 pallets per hour output due to smooth and effective auto operation
• Bagged goods and thinly layered products are not recommended
